INPUT AND OUTPUT PRICE INDICES IN AGRICULTURE – LIVESTOCK: AUGUST 2026

The evolution of the Input and Output Price Indices with base year 2020=100.0 for August 2026, according to provisional data, is as follows:

The Output Price Index in Agriculture – Livestock (excluding subsidies) decreased by 1.1% in August 2026, compared with August 2025. The corresponding index in August 2025 had recorded a decrease of 7.5%, compared with August 2024 (Table 1, Graph 1).

The decrease of 1.1% in the Output Price Index in August 2026 compared with August 2025 (Table 1), results from: a) a decrease of 1.5% of the price index in crop output group and mainly on the rate of change of the group fruits, and b) an increase of 2.5% of the price index in animal output group.

The Output Price Index in August 2026 increased by 2.3%, in comparison with July 2026 (Table 2).

The twelve-month weighted average output index from September 2025 to August 2026 decreased by 0.8%, compared with the corresponding index of the period from September 2024 to August 2025 (Table 3).

The Input Price Index in Agriculture – Livestock increased by 5.9% in August 2026, compared with August 2025. The corresponding index in August 2025 had recorded a decrease of 0.8%, compared with August 2024 (Table 4, Graph 1).

The increase of 5.9% in the Input Price Index in August 2026 compared with August 2025 (Table 4), is due to: a) an increase of 7.6% of the price index in goods and services currently consumed in agriculture group, and b) an increase of 1.2% of the price index in goods and services contributing to agricultural investment group.

The Input Price Index in August 2026 increased by 1.1%, in comparison with July 2026 (Table 5).

The twelve–month average input index from September 2025 to August 2026, increased by 2.6% compared with the corresponding index of the period from September 2024 to August 2025 (Table 6).

METHODOLOGICAL NOTES

General

The compilation of the Input and Output Price Indices in Agriculture and Livestock by the Hellenic Statistical Authority (ELSTAT) started in 1967 with base year 1966=100.0.

Purpose of the indices – Definitions

The purpose of the Output Price Index is to measure the relative change in the prices that the producers receive in the agricultural – livestock sector from the sale of their products. The purpose of the Input Price Index is to measure the change in the prices paid by producers for the purchase of the means, goods and services used in the production process.

The Output Price Index is composed of the crop and the animal output sub-indices. The Input Price Index is composed of the intermediate consumption goods and the fixed capital formation goods sub-indices.

As regards the Output Price Index, the prices collected are the selling prices of the products from the producers (without subsidies) and are considered as producer prices, excluding VAT, transport costs and various deductions in favor of third parties.

As regards the Input Price Index, the prices collected are the prices paid by the producers for buying the goods and services they need for the production process, excluding VAT and transport expenses.

Legal basis

The compilation of the Input and Output Price Indices in Agriculture and Livestock was based until 2024 on voluntary agreements between the Member States of the European Union (EU) and Eurostat. The foundations for these agreements were laid in the early seventies. From 1 January 2025, Regulation 2022/2379 of the European Parliament and of the Council on statistics on agricultural input and output, and Commission Implementing Regulation (EU) 2023/1579 laying down rules for the application of Regulation (EU) 2022/2379 as regards agricultural price statistics, are in force.

Reference period

Month.

Base year

2020=100.0.

Revision

The Input and Output Price Indices are fixed-basis indices. The recent revision was carried out with base year 2020=100.0.

Statistical classification

According to the common methodology used by the EU Member States, the groups of products of the Agricultural Price Indices follow the same classification as in Economic Accounts for Agriculture (EAA).

Geographical coverage

The indices cover the whole country.

Coverage of economic activities

The Input and Output Price Indices cover the transactions for products and services in the sector of agriculture and livestock. In addition, the transactions for olive oil and must - wine which are included in the manufacturing sector, are covered when their production – manufacturing process takes place at the level of agricultural unit, thus it is considered to be an activity of the agricultural sector.

Seasonality

Seasonality influences agricultural and livestock production and as a result some products are not available every month in a calendar year. For this reason, the weighting coefficients of output products differ per month in the year.

Statistical survey

The data sources are the commercial and the industrial enterprises which buy the final products directly from the producers, as well as the agricultural cooperatives (unions) that collect the agricultural products. Moreover, prices are collected from various organizations that collect products from the producers, such as raisin associations, and from agencies that collect price data, such as the Ministry of Rural Development and Food.

The price data for output price index are collected from 745 sources, while for input price index from 665 sources across the country.

Publication of data

The Input and Output Price Indices with base year 2020=100.0, are released since May 2024 with March 2024 data as first reference month. The back casting calculations of the time series of the indices for the years before the year 2020, were calculated by dividing the price indices of products and groups by the corresponding price index of the year 2020 (2015=100.0), so that the changes (monthly and annual) of the indices of the time series remain the same.
